

A Vote for Solid Ink is a Vote for the Environment

Solid Ink's cartridge-free design and minimal packaging, its nearly waste-free printing process and its safe, toxin-free Solid Ink sticks make it a very earth-friendly way to print.

Fewer Consumables

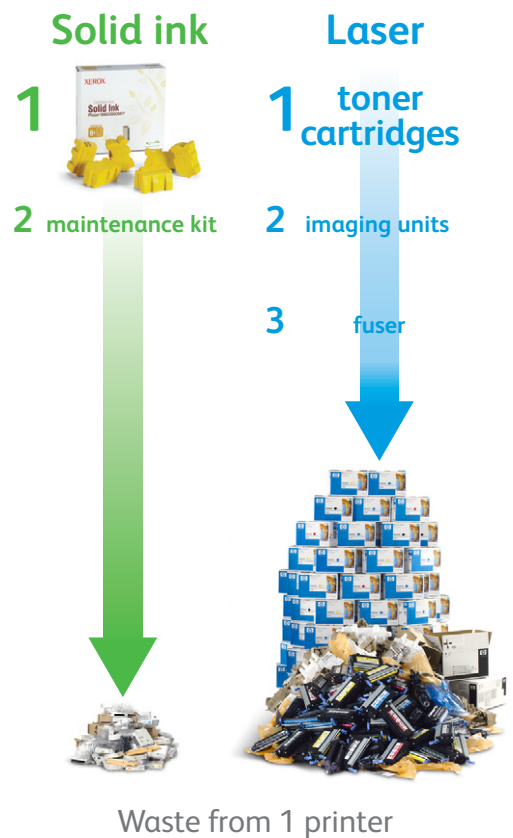

Our Solid Ink print technology is easy on the environment thanks to the low number of consumables required for printing. Fewer replaceable units means there is less to throw away.

When a laser printer runs out of toner, you are still left with big, bulky print cartridges that need to be disposed. Plus there are other items such as fusers, fuser oil and imaging units.

Solid Ink printers utilize compact solid ink sticks with no casings. So when you run out of ink, there's nothing left to throw away. The only other replaceable unit is a maintenance roller. The recyclable, environmentally-friendly roller lasts thousands of pages, so it only needs to be replaced a few times in the life of the printer.

Your customers want green printing technology that's good for their business AND the environment. Xerox Solid Ink Technology offers customers the best of both worlds: consistently high color print quality and earth friendly features.

Solid Ink Advantages

Training Module

Less Waste

Consider this — Solid Ink images are printed onto a rotating drum and offset onto paper in just one pass of the print engine. This Xerox-exclusive imaging process results in nearly 100% ink-to-page transfer efficiency during normal printing. In comparison, conventional laser / LED printers' toner-to-page transfer efficiency is much less.

For every 100,000 printed pages, a Solid Ink printer generates approximately 5 lbs. of waste, compared to approximately 157 lbs. for a typical color laser.

The bottom line? Solid Ink printing generates 90% less waste during use than a typical color laser product.

Earth Friendly Ink

Resin-based Solid Ink sticks are completely toxin-free, and contain no solvents. And unlike toners, they cannot spill, leak or smudge on your clothes, so they are both safe AND clean.

Did you know that you can recycle solid ink printouts just like the output from laser printers or office copiers? Because solid ink prints the same vivid color on any paper, you can use recycled paper for all your printing. You don't need expensive, super-white paper to get superb image quality.

Solid Ink sticks are much smaller than those cumbersome print cartridges, so they're easy to store. Smaller supplies mean fewer greenhouse gas emissions from shipping, and there's less packaging to recycle.

Solid Ink represents the best of both worlds: power and performance to handle complex print jobs and earth friendly features to help your customers go green.

Solid Ink: The natural favorite!

Safe and clean.

Resin-based solid ink sticks are completely safe and clean, and contain no solvents. Unlike laser print cartridges, they cannot spill, leak or smudge on your clothes.
